Worm SNC and	Carretta Caretta: Waste organization 64
Name:	Worm SNC and Carretta Caretta
City, country: Name of entrepreneur/ founder:	Augusta, Italy Paolo Garelli and Roberto Pirani
Description	Since 2008 WORM works in the environmental sector, specially in the field of ur- ban waste collection. The key asset is to re-think the collection of waste in an un- conventional perspective, increasing the perception of the garbage as resource. Another key asset is to enhance the connection of the waste collection behav- iour with social, economic and cultural patterns that are well accept.ed within the local context. WORM snc takes move and develops from the initiative "Carretta Caretta", a small truck traditionally used for the transport of goods and in this case re-equipped for serving into the waste collection especially in historical towns with narrowed streets. The small truck stops in prescheduled spots of the town and invite citizens to dispose their pre-sorted waste.
Investment	Start up capital: EUR 5,000. Rate of return on investment: almost 200% Sources of funding: Personal.
Stakeholders	Public-shared companies, citizens, town councils: Comune di Lipari (Stromboli), Comune di Atina (Frosinone), Comune Santa Marina Salina, Comune di Roma, Comune di Procida, Comune di Spadafora (ME), Comune di Mantova, Comunità montana dei monti Lepini (Frosinone), Comune di Terracina (Latina), Comune di Ventotene.
Employment generation	WORM counts only two members and full time employees, an environmental en- gineer and a project designer. Once that the Carretta Caretta program is defined and implemented, a variety of functions are generated. Generally speaking, the program produce a clear re-qualification of human resources and skills, with a consequential cost-effectiveness and added value for the municipalities involved into the scheme.
Timeline	WORM was born in 2008 with the aim of spreading the Carretta caretta patent, mainly in villages and small towns, and of working to reduce, reuse, recycle and organize waste collection.
Feasibility study	The feasibility study was carried out in 2008 and a short description is available here: www.carrettacaretta.com/?p=6
Geo-social-economic setting	Not available.

motivation         without a door to door collection. Caretta aims to combine the education of the population with an easy collection, accessible to everybody.           Strenghts         • Increase economic savings.         • Increase recycle.         • Increase recycle.           • Empower the status of dustmen and street sweepers.         • Reduces traffic.         • An holistic approach to consumption and waste behaviour.           See video: www.youtube.com/watch?v=f3vg90aGf-c         • An holistic approach to consumption and waste behaviour.           See video: www.youtube.com/watch?v=f3vg90aGf-c         • Challenges and         • The progressive reduction of incomes for municipalities is increasing the need of a constraints           • the initiative is recently encountering a series of new opportunities, also thanks to the raising awareness on environmental related issues. However, the following constraints remains to be underlined:         • the waste management is in fally solidly in the hand of lobbies that are connected with strong economic interests which are difficult to be protected and WORN already experienced several counterfeits and illegal duplications (a legal trail is currently in progress with the Rome Municipality).           • while the initiative should be implemented in its integrity with the full reorganisation of the waste collection system, there is the risk that municipalities just use the small truck without following the full reorganisation and upgrading of the staff.           • Use of innovative trechnologies         Social: more confidence, trust and reciprocity between citizens. Environmental: decrease of waste and use of energy. Economic: less cost and more benefit.	-	Key features	The Carretta caretta patent is a system that improves waste collection in historical city centres, where big waste collection trucks find it difficult to enter. Together with a small truck, the staff is totally re-organised and performs several functions during the waste collection, together with the promotion of a proactive attitude among citizens and users.
Improves citizen environmental awareness and relationships.     Increase recycle.     Empower the status of dustmen and street sweepers.     Reduces traffic.     An holistic approach to consumption and waste behaviour.     See video: www.youtube.com/watch?v=f3vg90aGf-c      Challenges and     The progressive reduction of incomes for municipalities is increasing the need of a     constraints     caretta offers a solution that is at the same time easy and inexpensive. Therefore     the initiative is recently encountering a series of new opportunities, also thanks     to the raising awareness on environmental related issues. However, the following     constraints management is in Italy solidly in the hand of lobbies that are con-     nected with strong economic interests which are difficult to be roptaced.     the waste management is in Italy solidly in the hand of lobbies that are con-     nected with strong economic interests which are difficult to be protected and     WORN aiready experienced several counterities and illegal duplications (a     legal trail is currently in progress with the Rome Municipality).     while the initiative should be implemented in its integrity with the full reorgani-     sation of the waste collection system, there is the risk that municipalities just     use the small truck without following the full reorganisation and upgrading of     the staff.     Not always municipalities proved to seek for cost-effectiveness and often the     prefer more costly and politically driven solutions (for instance connected with     landfills).     Direct activities and     Impacts     Social: more confidence, trust and reciprocity between citizens.     Environmental: decrease of waste and use of energy.     Economic: less cost and more benefit.     While the truck is upgraded with several technologies recently applied to the waste     collection (balances, semi-automatic arms, displayers) the innovation is more for     cused into the human and organisational aspects.     Evidence of a holistic	-		Several statistics point out that in Italy the waste sorting works only up to 20% without a door to door collection. Caretta aims to combine the education of the population with an easy collection, accessible to everybody.
constraints         better management with lower costs for key services like waste collection. Carretta offers a solution that is at the same time easy and inexpensive. Therefore the initiative is recently encountering a series of new opportunities, also thanks to the raising awareness on environmental related issues. However, the following constraints remains to be underlined:           -	-	Strenghts	<ul> <li>Improves citizen environmental awareness and relationships.</li> <li>Increase recycle.</li> <li>Empower the status of dustmen and street sweepers.</li> <li>Reduces traffic.</li> <li>An holistic approach to consumption and waste behaviour.</li> </ul>
ImpactsEnvironmental: decrease of waste and use of energy. Economic: less cost and more benefit.Use of innovative TechnologiesWhile the truck is upgraded with several technologies recently applied to the waste collection (balances, semi-automatic arms, displayers) the innovation is more for cused into the human and organisational aspects.Evidence of a holistic approach/world viewCarretta caretta is a very visible small scale example of the cycle of production consumption, waste, recycle.Scale of benefitsImprovement of quality of life, especially in the Mediterranean historical downtowns Upgrading and poly-functionality of operators into the waste sector. Increase of awareness among citizens.	-	_	<ul> <li>the waste management is in Italy solidly in the hand of lobbies that are connected with strong economic interests which are difficult to be replaced.</li> <li>the licence and copyright on Caretta caretta is difficult to be protected and WORN already experienced several counterfeits and illegal duplications (a legal trail is currently in progress with the Rome Municipality).</li> <li>while the initiative should be implemented in its integrity with the full reorganisation of the waste collection system, there is the risk that municipalities just use the small truck without following the full reorganisation and upgrading of the staff.</li> <li>Not always municipalities proved to seek for cost-effectiveness and often they prefer more costly and politically driven solutions (for instance connected with</li> </ul>
Technologiescollection (balances, semi-automatic arms, displayers) the innovation is more fo cused into the human and organisational aspects.Evidence of a holistic approach/world viewCarretta caretta is a very visible small scale example of the cycle of production consumption, waste, recycle.Scale of benefitsImprovement of quality of life, especially in the Mediterranean historical downtowns Upgrading and poly-functionality of operators into the waste sector.
